The Case Against Hepatitis B Vaccination: Prevent Your Newborns & Infants From Being Permanently Injured

Synopsis

Government laws and recommendations coerce us into receiving dozens of vaccinations. Every year, millions of newborns and infants are injected with genetically-engineered pathogens, dangerous metals and industrial chemicals-called vaccines. The hepatitis B vaccine is administered moments after the child is born, immediately putting the newborn on the path of disease. There is a direct link between vaccinations and the broad range of diseases now plaguing newborns, infants, toddlers and adolescents. This makes "childhood vaccinations" the citizenry's most urgent health issue, today. This book refutes the CDC's rationale for the "universal vaccination" of newborns and infants with hepatitis B vaccines, while describing the political and economic corruption associated with public health vaccination laws and recommendation.

Customer Reviews

I didn't really read this book, I sent it to my "California brainwashed adult son," who is expecting his first child. All I know is that the Hep B vaccine's only purpose is to make medical professionals and big pharma wealthier, and at the same time, help compromise the immune system of infants and

children to the point that some even die. I can't believe brainwashed young adults think the Hep B vaccine is good for their children. The disease is spread from street drug needles or unprotected sex with different partners. Why would an infant need a vaccine like that? In CA, a child doesn't need to get any vaccines until he/she attends day care or public school. Hep B Vaccine ingredients are: Ammonium sulfate, formaldehyde, sucrose, thimerosal. Vaccine reactions are: Fever, diarrhea, erythema, tenderness, swelling, irritability, loss of appetite, sleepiness, seizures, vomiting. However, some parents say after the 2nd Hep B shot their baby died and they were later, awarded money from the Vaccine Court. If you or your loved one was injured by the Hepatitis B vaccine, you could be entitled to up to \$250,000 if you file a Hepatitis B vaccine lawsuit.

This book presents us with a secular view on science. A secular view on science holds that the scientific method is a spiritual quest that does not concern itself with religious quackery, such as that often promoted by vaccers. If people want to be religious, that's fine. But if they want to make their religion into law and enforce that on me then I have a right to retaliate. So has everyone else who experiences such horrors. Which is why science has separated from atheism. 99 years and 9 months of patience was a long enough time for scientists to stop concerning themselves with atheist demands that the progress of scientific research be slowed down. I know its difficult to read secular science books because people often assume that the author is one of those self described know it - all types which is putting so many atheist doomsday alarm books out of the market, because their authors are failing to realize that, the world is simply not going to end any neartime soon, and humanity will not cease to exist if vaccine production is limited. Despite I give the book four stars, do not take my review word for word, or as a medical advise. Its just a review and thats it (if it turns out to be unwanted input I can edit it). Suspend all laws that make vaccinations mandatory, and read this book, or at least, any book on vaccines that presents the most up to date secular interpretation of current results obtained from recent data on vaccine research that has been published by credible, scientific sources. Summary: we need vaccines much less today than we did in the past (I have been vaccinated over 20 times and none of my vaccinations prevented any disease) because worldwide access to the internet has resulted in less demand for vaccines and more demand for antibiotics, especially new antibiotics that are free of dangerous chemicals,gmo content, nano fibers and synthesizers.
