The Biology Of Belief

Synopsis

This 10th-anniversary edition of Bruce Lipton's best-selling book *The Biology of Belief* has been updated to bolster the book's central premise with the latest scientific discoveries—and there have been a lot in the last decade. *The Biology of Belief* is a groundbreaking work in the field of new biology. Former medical school professor and research scientist Bruce H. Lipton, Ph.D., presents his experiments, and those of other leading-edge scientists, which examine in great detail the mechanisms by which cells receive and process information. The implications of this research radically change our understanding of life, showing that genes and DNA do not control our biology; instead, DNA is controlled by signals from outside the cell, including the energetic messages emanating from our positive and negative thoughts. This profoundly hopeful synthesis of the latest and best research in cell biology and quantum physics has been hailed as a major breakthrough, showing that our bodies can be changed as we retrain our thinking. --This text refers to the Paperback edition.

Book Information

Audible Audio Edition

Listening Length: 3 hours and 21 minutes

Program Type: Audiobook

Version: Abridged

Publisher: Sounds True

Audible.com Release Date: October 26, 2006

Language: English

ASIN: B000OYEWCE

Best Sellers Rank: #24 in Books > Politics & Social Sciences > Philosophy > Consciousness & Thought
#2332 in Books > Audible Audiobooks

Customer Reviews

I found Lipton's book to be incredibly outrageous! He presents a vision of a peaceful world that can be if we take personal control of our belief systems that have manifested our reality. The case for saying make love not war is very strong and demonstrated by the scientific proof as well as spiritual insights Dr. Lipton presents. This book should be a must read for anyone interested in trying to find ways to change the present violence stream in our societies.

For me, as a scientist, this book bridges the gap of materialism, energy and spirituality, which I knew

was always there. I just never knew how to reconcile it. This book really helped!

Very interesting concepts and a way to view interrelatedness of all things. I enjoyed it, but have a science background. It may be a little too technical for some, but the explanations and way that it is written makes these concepts as simple as they can be. Great read, but I would have liked the second part on applying these concepts to life to be longer and more explanatory.

Excellent book . 10th anniversary edition with updates included in each chapter . It makes the argument that we are more than what our DNA programs us to be. It questions Newtonian physics / science and Darwinian Genetics/ Evolution and demonstrates examples of adaptations made by organisms as a result of different stimuli , interactions , and changes in consciousness .

Bruce Lipton is such a great writer that inspires one to trust that they can change any inner state of being as long as one is dedicated and committed at doing so. This book is so concise and clear and has truly helped me make transformations in my life that I wanted to see happen. Change the internal world and the external has a greater chance of changing for you. This book is a great add-on to the Joe Dispenza collection of books. I highly suggest these books to anyone dedicated to a spiritual journey but also backed up by science.

This book is extremely important for those that want to know how we really can change our life and how important beliefs and belief chemistry is to our health and spiritual enlightenment. PROOF that we are not the victim of our DNA and we have access to healing ourselves and creating a "higher" energy / vibration system to guide our life. The God molecule that all the scientist are looking for is right there composing our cell walls with a communication system in place to send and receive the creative force we create to manifest the world we desire.

Astonishing ideas are presented and back by some of the most cutting edge science available today. Bruce Lipton took a leap of faith with Biology of Belief and it beautifully pays off. Proof that your life, even at a cellular, sub atomic level is created by your environment, your perceptions and your beliefs. Through understanding the effects of quantum physics and our consciousness roll in the vast amass of potential we become exactly who we are, or want to be.

Wow! Of all the books I have read over the past 70 years, this book from Bruce Lipton has had the

most profound impact on my understanding of the reality of life. What a shame that all my previous years of struggle trying to get to grips with Success, Happy Loving Relationships, Fitness and Health, Positive Parenting etc, were all based on falsity and doomed to failure. The truth is that up 'til now, science has not understood the true role of our genetic structure and/or how our environment truly impacts how we unconsciously think and act - even as babies in the womb!!!!This outstanding book should be required reading for everyone! Every scientist - every doctor - every teacher - every student - every theologian - YOU!!!!I promise you, this work has the power to change you - in a profound and positive way - for ever.Thank you Bruce Lipton. RK, New Zealand
