National Geographic Little Kids First Big Book Of Bugs (National Geographic Little Kids First Big Books)

Synopsis

The experts at National Geographic present a delightful reference that introduces young children to bugs of all kinds: big and small, jumping and crawling, colorful and creepy. This charming book explores backyard favorites, such as ladybugs and lightning bugs, and introduces kids to more exotic species that inhabit rain forests and deserts around the world. Colorful photos are paired with profiles of each insect, along with facts about the creatures' sizes, diets, homes, and more. This book will quickly become a favorite at storytime, bedtime, and any other time!

Customer Reviews

"Featuring fun, short entries about planets, stars, galaxies and more, this charming book is perfect for reading aloud or for beginning readers to enjoy themselves." --Today's Zaman

"Really interesting and encourages great conversation between you and your child. A fun book for any family to explore." --The Children's Nook "blog"

"Featuring fun, short entries about planets, stars, galaxies and more, this charming book is perfect for reading aloud or for beginning readers to enjoy themselves." --Today's Zaman

CATHERINE HUGHES is the author of four previous books in the National Geographic Kids First Big Book series: National Geographic Little Kids First Big Book of Animals, National Geographic Little Kids First Big Book of Dinosaurs, National Geographic Little Kids First Big Book of Space, and National Geographic Little Kids First Big Book of the Ocean. Ms. Hughes is also the science editor for National Geographic Kids and National Geographic Little Kids magazines and has a degree in early childhood development.

I bought a set of these to include in a unit on non-fiction text features for my Kindergarten/First Grade class. This book is perfect for several reasons. It is written at a level where early readers can do a lot of the reading themselves and use their decoding strategies to successfully problem solve unfamiliar words. Subject matter captivated their attention and helped underscore importance/use of many of the features we have discussed, i.e. contents page, photos, captions, charts, map, glossary, index. Just wish it showed better examples of labels, but that would make this book beyond perfect. Did I mention that I love this book? :)

I bought this book for my 2 year old son. It has awesome photos, which you can always expect from National Geographic, and great information. I must admit that while introducing this book to my son, I realized just how little I actually know about the animal kingdom. It's a great book for kids and adults too!

Gift for my 3 year old great nephew. He absolutely loves these books! Nice quality, durable books. His new baby sister will probably enjoy them a couple of years from now too.

great education book for your children! reading reading and reading it is very important,how ever one detail this should have stronger pages because this is a children book, and it can tear very easy

This is one of my son's first non-fiction books. I've never seen my child so interested in learning. He's super inquisitive, as most kids are, but he is obsessed with this book. He asks 8 million questions per page, which then leads us to researching stuff online. He's THREE, so this is amazing!

My 7 year old grand daughter requested for her birthday. She found it at her school library, loved it, and had to take it back. She put it on her birthday list!

My daughter loves this book, it's very educational she is three and loves to look at the pictures I will definitely be ordering her more books from this series.

I have to say that all the books in the Kids First Big Book series are amazing. These have true National Geographic quality images, some snippets about the animals that small kids can understand/ remember and decent quality paper capable of withstanding some rough handling. There is likely a little redundancy between this Big Book of Animals and the Big Book of Ocean, but it is only because the content is categorized by the various animal habitats (ocean being one of them). I would completely overlook this aspect if you are trying to get your little ones excited about other forms of life on earth. My 3 yr old and his nanny spend hours with this book on a regular basis.
